July 28, 2026**EHS PARTNERSHIP REVIEW — DESKTOP RECORDS REVIEW & FACILITY VISIT NOTIFICATION**

Your facility and your crews play a vital role in the Integrated Water Services platform. Working as a team, we plan and deliver safe, effective, and efficient operations — and we get better together. As IWS grows, every operating company shares the same commitment: familiar with, and upholding, the same values and safe practices across every shop, service center, and field job that carries the IWS name.

Safety is a core value, and strong Environmental, Health, and Safety (EHS) performance is a goal of IWS leadership at every level. To support that goal, IWS has engaged Canon Safety to conduct a consistent, risk-based EHS review of each operating facility. Performance from this review forward is managed through the **IWS Safety Hub** — the live system where findings, corrective actions, compliance scores, and crew recognition are visible from the boardroom to the breakroom.

The EHS Review Program assists IWS leadership by:

- Reviewing the risks associated with each operation before the facility visit, using a water-treatment risk hierarchy built from industry fatality and injury data;
- Reviewing facility-specific EHS performance, written programs, and records; and
- Understanding each facility's ability to manage EHS performance relative to the risk of the work it performs.

Where regulatory deficiencies are identified, or where IWS expectations are not yet met, corrective actions will be established — each with an owner, a practical fix, an estimated cost, and a due date — and tracked in the hub to verified closure. Nothing is filed away, and nothing is a surprise.

The intent of this review is transparency, not a report card. The baseline is where we improve from — together.

Findings will be visible to your team in the hub, good calls by your crew will be recognized by name, and progress will be measured openly. Facilities are never compared to embarrass; they are supported to improve.

The review begins with a **desktop review** of the records listed on page 3, followed by a scheduled facility visit to see your programs where they matter — on the floor, with your crews. This letter opens that formal evaluation and will ultimately help IWS understand how EHS expectations are defined, communicated, and monitored at your facility.

Please prepare the page-3 items as electronic copies (hard copies scanned) and submit them ahead of, or at, the desktop review. Information provided will be retained by Canon Safety on behalf of IWS at the conclusion of the review. **The information requested excludes all personal health information subject to HIPAA.** Canon Safety will keep all information related to this process confidential and will not disclose it to any outside party except as directed by IWS or required by law.

We look forward to meeting with you on ____ / ____ / **2026**. Continued growth in EHS programs moves all of us toward the only acceptable goal — every crew member home whole, every shift. I will be in touch shortly to confirm scheduling; please reach out with any questions in the meantime.

Respectfully,

MICHAEL LYONS

FACILITY REVIEW SCHEDULE

EXAMPLE — FINAL SITE LIST TO BE CONFIRMED WITH IWS

FACILITY / OPERATION	DESKTOP REVIEW	FACILITY VISIT	FIELD RIDE-ALONG
Fabrication & Manufacturing — Marshfield, WI	Week of _____	_____	—
Filter Manufacturing & Service — Anderson, IN	Week of _____	_____	_____
Regional Service Center — Texas	Week of _____	_____	_____
Regional Service Center — Florida	Week of _____	_____	_____
Regional Service Center — Pennsylvania	Week of _____	_____	_____
Treatment Systems & Operations — Austin, TX	Week of _____	_____	_____

Site visits are scheduled around production, not against it. Field ride-alongs observe a normal customer-site job performed by your crew — no staging, no showmanship; the ordinary day is the audit.

WHAT TO EXPECT — THE REVIEW, STEP BY STEP

STEP	WHAT HAPPENS
1 · Desktop Review	Canon reviews the page-3 records before arriving — so the on-site day is spent on your floor, not in your filing cabinet.
2 · Facility Visit	A walk of the operation with your team: programs verified where the work happens, conversations with crews at every level. Good practices get documented with the same energy as gaps.
3 · Findings in the Hub	Every finding entered with an owner, practical corrective action, estimated cost, and due date. Your facility sees everything IWS sees.
4 · Verified Closure	Corrective actions are confirmed closed by walkdown — and your crew's good calls go on the hub recognition board by name.
5 · Day-90 Re-Score	Canon returns, re-scores the facility, and the baseline becomes a trendline your team can be proud of.

What this is not: a gotcha exercise, a ranking to shame facilities, or a binder that disappears into a drawer. Findings are written to be fixed, budgets are attached so fixes are fundable, and recognition is rotated through the whole crew — because the goal is a culture your people identify with, not a score they fear.

DOCUMENT PREPARATION CHECKLIST — DESKTOP REVIEW

Electronic copies preferred (scan hard copies). Provide what exists today — a missing document is a finding we fix together, not a failure. Items follow the nine sections of the review framework; excludes all HIPAA-protected personal health information.

1 · LEADERSHIP & POLICY

- ☐ Signed company safety policy / commitment statement
- ☐ Organization chart with EHS responsibilities
- ☐ Stop-work authority policy or equivalent

2 · GENERAL RULES & ADMINISTRATION

- ☐ Employee safety handbook / general safety rules
- ☐ Drug & alcohol program description
- ☐ Disciplinary / enforcement policy

3 · TRAINING

- ☐ Training matrix by role (or current equivalent)
- ☐ Training records — confined space, HazCom, LOTO, fall protection, respiratory, forklift/crane, first aid/CPR
- ☐ New-hire orientation outline

4 · INJURY MANAGEMENT & RECORDS

- ☐ OSHA 300 logs & 300A summaries — last 3 years
- ☐ First-aid log (if kept separately)
- ☐ Workers' comp loss runs & current EMR letter
- ☐ Return-to-work / transitional duty program
- ☐ Incident & near-miss reports — last 12 months

5 · EMERGENCY PREPAREDNESS

- ☐ Site emergency action plan & evacuation maps
- ☐ Drill records — last 12 months
- ☐ Confined-space rescue plan(s)

6 · EMPLOYEE PROTECTIONS

- ☐ Harassment & workplace violence policies
- ☐ Exposure/medical records access procedure (1910.1020)

7 · FLEET & DOT

- ☐ Vehicle use policy & MVR grading criteria
- ☐ Driver qualification file sample (2–3 drivers)
- ☐ Vehicle inspection/maintenance records sample
- ☐ Telematics reports, if in use

8 · SAFE WORK PROCEDURES & EQUIPMENT

- ☐ Written programs: confined space, LOTO, HazCom, hot work, fall protection, respiratory, PPE assessments, hearing conservation
- ☐ Confined space & hot work permits — recent examples
- ☐ Gas monitor calibration & bump test records
- ☐ Crane/hoist/rigging & forklift inspection records
- ☐ SDS index / access method
- ☐ Chemical inventory (for RMP/PSM threshold screening)

9 · PROGRAM HISTORY

- ☐ Prior EHS audits or insurance surveys
- ☐ Regulatory inspections, citations, or enforcement — last 5 years
- ☐ EHS KPIs currently tracked & recent reports
- ☐ Program revision history (if documented)

Questions while you prepare? Contact Michael Lyons — mlyons@csrhighgroup.com · 1.800.553.2964. If a document doesn't exist yet, note it on this list and bring the list; that's exactly the kind of transparency that makes this program work.
