CANON SAFETY — WEEKLY MEETING SUMMARY

Week 21: Professionalism | PSMS: Working Around Mobile Equipment | Nov 2–6, 2026 | Host: Alex Clubb

NEAR MISS THU
Nobody hurt

417	5/5	1	0
FORMS REVIEWED MON–FRI	MEETING DAYS LOGGED	NEAR MISS, REPORTED THE SAME DAY	"STOP WORK UTILIZED" TICKS MON–FRI

Thursday, about 12:20 PM: a hose got away. At the start of a tank cleanout on an SM location, a hose being sprayed through a manway got away from the person handling it, whipped out and hit two nearby tanks. The pump operator shut down the pump. **Nobody was hurt and nothing was damaged.** From where Cindy Smith stood, it looked like the hose passed close behind Jordan Lemmons's head. Jordan checked on everyone, then had the crew put someone where they could see both the pump truck and the crew, and tie off the hose. **The cause hasn't been established, so don't guess and don't blame anyone.** A pump truck's reach is as long as its hose.

The Week in Five Thoughts

Day	Meeting Focus	**Recognition** (from Matt's reviews)
Mon 11/2	*"We win in this business by being invited back the next day."*	Bobby Galindo — heard a hiss on a reconnect, stopped the crew, moved them back
Tue 11/3	*"Think before you speak. Think before you joke. Think before you act."*	Brianda Sandoval — trailer 128 forms complete, two days running
Wed 11/4	*"We operate with professionalism, even when no one is watching."*	Ralph Forbes — vac truck no-show, changed the plan and wrote it up
Thu 11/5	*"Your awareness has to be higher than your intent."*	Jordan Lemmons / Cindy Smith — handled Thursday's near miss the right way
Fri 11/6	*"Act like the person the client would want back tomorrow."*	Humberto Salazar — clean trailer and job forms Tue, Wed and Thu

Field Wins of the Week

- **Bobby Galindo**, Nail Tillman (Mon): stopped the crew, pulled them back and told the MT. Work resumed only after the bolts were tightened and the well tested clean. Matt's reviews counted **zero** "stop work utilized" ticks all week, including this one. If you stop it, **tick the box and write two lines.**
- **Bryan Medlin**, trailer 604 (Mon): found broken cascade rack welds, put it on both forms and named who was told. That's the write-up we want on every defect.
- **Ray Solis**'s crews (Fri): saw a damaged spool, stopped and told the MT, and the valve got locked out. With slickline on the next well, they kept the crew clear and wrote the lesson: bigger exclusion zone on SimOps.
- **Nathan Contreras**: on Matt's clean list Monday, Tuesday, Thursday and Friday. **Dennis Easley**: hydro and cascade entries complete Tuesday through Friday.

New this week: Read the Bottle. We walked through hydro dates, what's expired and what the star allows. **Past its month, the bottle comes off the trailer.** Friday, **Bobby Fleming** wrote up an expired workpack. That's the habit.

FROM THE OFFICE — THE NUMBERS

Daily StreetSmart reviews (Nov 2–6) | Hub compliance (Nov 2–3 audited so far) | Samsara GPS report (Nov 6)

EARLY READ
Matt's weekly for Oct 29–Nov 4 hasn't come in yet

97%	97%	87%	8
DAILY H2S FORMS	TRAILER INSPECTIONS	TRAILER READINESS	FLAGGED ON GPS
95 of 98 · 2 days audited	**29 of 30 · 2 days audited**	**26 of 30 · last report 73%**	**▲ from 3 · longest 3 days**

These cover Monday and Tuesday only, so don't call readiness fixed yet. It has swung up and down for weeks.

The Win

- **Trailer readiness is pointing the right way.** It was the one gap on last week's summary at 73%, and the first two audited days ran 87%.
- **FR is close:** 5 "No" answers out of 104 for the week. Three came from one contractor who reports not being issued coveralls. If that's right, it's on us.
- **Crews are working safely around equipment.** Before Thursday, Matt's reviews since 10/28 showed no mobile-equipment incident or near miss. Spotters, exclusion zones and hold points are showing up in the write-ups.

The Gap — Everything Before the Job Starts

Trailers rolled with known defects. 139's doors were flying open on lease roads, and **Matt's call is that 139 doesn't go back out until it's repaired and signed off.** 605's marker light was written up two days running (10/29, 10/30) and it still went out. **No trailer moves unless every light works and the doors stay shut.**

What Matt's Daily Reviews Keep Finding — five habits that fix most of it

- **Say who you told.** Tuesday through Friday all had readiness forms naming a problem and no person. A problem with no name next to it is a problem nobody owns.
- **Defects go in the comments field.** On Thursday, every trailer inspection and H2S daily said "N/A" under Comments for Management, and 5 of 9 readiness forms left that question blank. Real problems were sitting in photo notes. Friday, three people used the field, and that's how an expired workpack came to light.
- **Write the hydro date.** Trailer 503's hydro dates were blank all five days, on both shifts Thursday and Friday. This is the week's lesson: read the bottle and write it down.
- **Today's photo or no photo.** Thursday's and Friday's H2S dailies had photos as old as 2021. The cascade alarm photo was stale on 6 readiness forms Thursday and 4 Friday, which may be the app carrying it forward. Look at the date before you submit.
- **Close the job out.** The nightly check found 14, 10, 13 and 12 board assignments missing required forms Tuesday through Friday. Late forms may close some.

On the office, not the crew: the shop ran out of mask bags and stickers. Three techs reported it Tuesday and two more crews were short stickers Thursday. We owe you that resupply.

Trailer GPS: more on the list, but nothing long-dark. 8 flagged, up from 3 last week. The longest outage is **3 days**, down from 5, and nothing has been dark 30+ days for three reports running. **When you change a GPS battery or move a tracker, reply to the report** so it gets counted as fixed.

NEXT UP — WEEK 22 STARTS MONDAY, NOV 9

Theme: Standards | PSMS: Working at Height | Host: Ray Solis | 5:30 AM Morning Meeting

NEW TOPIC
Working at Height

The Standard

Fall protection is required at 6 feet (2 meters) or greater. Workers must be **100% tied off to approved anchor points** outside a protected area at all times. Fall protection equipment must be **inspected before every use.**

Five Life-Saving Rules for the Week

1. Inspect all fall protection equipment before use: harness, lanyard and anchor hardware
2. Secure all tools and work materials to prevent dropped objects when working at elevation
3. Maintain 100% tie-off to approved anchor points when outside a protected area
4. Validate that rescue capability is in place before ascending. Someone must be able to get you down
5. Follow three points of contact and safe climbing practices on all ladders

Our Version of It

The trailer deck. A tech climbs onto the deck to reach a monitor mast, figures it's about five and a half feet, and doesn't tie off. But the trailer is on a slope, the diamond plate is dusty, and below is a hitch and a set of jack stands. **Six feet is measured from where you'd land, not where you're standing.** Ask what's under you before you decide the rule doesn't apply.

Think About It This Week

- When did you last step up on a trailer deck or a tank stair without thinking twice? What's actually underneath you if you come off?
- Name the person who would get you down if you went over the side today. If you can't name one, you don't have a rescue plan.
- When have you seen someone clip to the wrong anchor point? Did you say something?

Don't Leave Mobile Equipment Behind — three habits to carry into Week 22

- **Anything under pump pressure can move.** Before the pump comes up, agree how the hose is controlled, who's watching, and how the pump gets shut down. Stay out of the path a loose hose can take.
- **All lights or no move.** Check hitch, ball, pins, chains, lights, doors and rack fresh at every hookup.
- **Near miss? Stop, check everyone, tell someone, and write it up.** Jordan and Cindy just showed everyone how.

The ask this week: every time you go up, name your anchor and your rescue before you climb. Every form, write down the problem **and** who you told. A standard doesn't soften because the job is routine. The routine job is where standards get skipped.

"Act like a professional at all times. Act like the person the client would want back tomorrow."
