CANON SAFETY — WEEKLY MEETING SUMMARY

Week 20: Precision | PSMS: Excavation | Oct 26–30, 2026 | Host: Caleb Smith

BEST WEEK YET
Best paperwork week since tracking began in September

390	5/5	0	3
FORMS REVIEWED MON–FRI	MEETINGS HELD	OPEN WATCH ITEMS ALL WEEK	TRAILERS OFF GPS (LOWEST SINCE MAY)

The Week in Five Thoughts

Day	Meeting Focus	Recognition
Mon 10/26	*"Precision is not perfectionism. It's doing the right thing in the right order before the ground opens up."*	Andrew Bailey / Gage Gonzales — wellhead disconnect run on PSMS
Tue 10/27	*"Slow down at the dig. Authorization before excavation is not bureaucracy."*	Luis Zarate / Tyrell Sanders — growing communication with the MT and crew
Wed 10/28	*"If conditions change underground, you don't push through. You get out. You reassess. You re-authorize."*	Dawson Drake / Jimmy Cooper — crew in full PPE, good habits
Thu 10/29	*"Treat the locate as a starting point, not a guarantee. Hand-dig near any flag. Verify by sight."*	Michael Jobe / Robbie Henigan — spotted a bee hive and told the MT before anyone walked into it
Fri 10/30	*"Own the process. Own the verify. Own the outcome."*	Humberto Salazar — ran the pre-job meeting while his lead was on the phone

Field Wins of the Week

- **Bryan Medlin** — caught a crew member putting an **R-24 ring on a BX-124 connection** and stopped it before it went on the wellhead (Fri). The wrong gasket never got made up. That's a real catch, and a real stop.
- **Humberto Salazar** — a helper stepping up to run the meeting, and running it well. That's exactly what helper training is for.
- **Michael Jobe / Robbie Henigan** — eyes on the whole location, not just the wellhead. The bee hive got called out before it became a first-aid case.
- **Nathan Contreras / Rolando Flores** — continuous atmospheric monitoring and communication start to finish (Mon).
- **Jordan Lemmons / Cindy Smith, Jerry Gonzales, Caleb Smith / Joseph Popillion, Dawson Drake / Gael Avila** — jobs to plan, no unplanned stops, every standard met.

The lesson from Bryan's catch: Matt's daily reviews counted **zero** "Stop work authority utilized" selections all week, yet crews were stopping wrong work. If you stop it or correct it, **tick the box and write two lines**: what you saw and what changed. Otherwise the catch only lives in your head and nobody else learns from it.

New this week: Below Grade = Davit Arm. When the work order says **BELOW GRADE**, the job is a cellar entry and the **Davit Arm rescue system goes out with the crew**. The board and the breakroom now flag it automatically. If you see "BELOW GRADE" and no Davit Arm on the trailer, stop and call.

FROM THE OFFICE — THE NUMBERS

The Win — Matt's bottom line: "the best week since weekly tracking began"

- **Integrity is clean, second week running:** no false PPE entries, no backdated paperwork, no undated JSAs, no old or "N/A" photos.
- **Everybody on last report's attention list improved.** The comebacks: Bryan Medlin (22 of 28 → 11 of 11, perfect), Joseph Popillion (5/10 → 7/7), Bobby Galindo (10/14 → 7/7), Dennis Easley (4/7 → 3/3), Allen White (5/6 → 3/3, after four weeks of missed daily forms).
- **ETX day forms went from 75% to 97%. Comstock went from 54% to 100%.** XTO ran 99%.
- **Morning trailer inspections missed only once**, down from 6. Jobs flagged with problems fell from 47 to 22.

Zero misses all week (among the 22): Robbie Henigan · Humberto Salazar · Larry Taylor · Nathan Contreras · Ralph Forbes · Jordan Lemmons · Bryan Medlin · Joseph Popillion · Dermont Morgan · Justin Pack · Jimmy Cooper · Bobby Galindo · Jerry Gonzales · Ruben Rojo · Cindy Smith · Michael Ellis · Dennis Easley · Allen White · Baldemar Bracamontes. Near-perfect: Dawson Drake (95%), Luis Zarate (94%).

The Gap — Trailer Readiness

44 of 60 readiness forms (73%). SM Energy crews filed **8 of 15 (53%)**; XTO filed 36 of 45 (80%). Over four weeks it has gone 82% → 71% → 86% → 73%. It won't stick on its own, so the rule is simple: **every trailer that comes back gets a readiness form, every time.** No readiness form means the next crew is hooking up a trailer nobody has checked.

What Matt's Daily Reviews Keep Finding — three form habits that fix most of it

- **Defects go in "Comments or Concerns for Management."** Not in the photo notes, where nobody reads them. A marker light out or a broken door bracket typed into a photo caption never reaches the shop.
- **Say who you told.** "No cones," "low cascade pressure" or "sensor missing" with no name next to it is a problem nobody owns. Write down who you notified.
- **Low bottles get reported, not just photographed.** Some readiness forms this week showed cascade bottles at about 2,000 psi, against 4,000–4,500 psi on the rest of the fleet. If the bottles are low, write it up and get them filled before the trailer goes back out.

Trailer GPS: the best report since tracking started. 3 trailers flagged, down from 11 on 9/22. The longest current outage is **5 days**; on 9/28 it was **123 days**. Trailers dark 30+ days: 7 → 0. The battery backlog is cleared. When you change a GPS battery or move a tracker, **reply to Matt's report** so it gets counted as fixed.

WEEK 21 KICKOFF — MONDAY, NOV 2

Theme: Professionalism | PSMS: Working Around Mobile Equipment | Host: Alex Clubb | 5:30 AM Morning Meeting

NEW TOPIC
Mobile Equipment

October Awards — first meeting of November: open with these

DILIGENCE
Tyrell Sanders
Every job packet complete, 5 of 5 (100%)

DUCK OF THE MONTH
Nathan Contreras & Rolando Flores
7 ducks for October, most of any crew

ATTITUDE
Announced at the meeting
Mike's pick

The Standard

> All personnel must **maintain safe distances from mobile equipment**, **establish clear communication with operators** before entering work zones, and **never assume an equipment operator can see you.**

Five Life-Saving Rules for the Week

1. Make eye contact with the operator before entering any swing or travel zone
2. Never walk behind backing equipment without radio or visual confirmation
3. Stay out of the blind spots — if you can't see the mirrors, they can't see you
4. Establish a spotter for any tight-space equipment movement
5. Stop all ground work when mobile equipment is moving nearby

Already Happening in the Field

- **Michael Jobe / Robbie Henigan** — a crew showed up with no tag line and no spotter. They were told they had to have one before the work went ahead (10/25).
- **Stefanie Kirschke / Robbie Henigan** — reviewed equipment placement before starting to keep clear walking paths around the wellhead during a reconnect.

Think About It This Week

- On location with a vac truck or kill truck: what is your signal to the operator, and what is theirs to you?
- Backing a trailer into a tight pad is mobile equipment work. Who is your spotter, and can the driver see them the whole time?

> **The ask this week:** two habits, one trailer. **(1)** Every time a trailer is hooked, backed or dropped, use a spotter. **(2)** Every time a trailer comes back, file the readiness form, with defects in the management comments and the name of who you told. Professionalism is the trailer the next crew picks up ready to go.

"We win in this business by being invited back the next day. That comes from how we carry ourselves as professionals and as people."
